

## Be careful what you flush

It's important that we all work together to avoid flushing items down our toilets and drains that could negatively impact local sewers and watersheds.

Remember, your toilets and drains are not trash cans. Sewer pipes and wastewater systems are not designed for the disposal of trash or other items such as medications.

**Here's what you need to know:**

### What not to flush

Medications

Masks | gloves | cleaning wipes

Floss | cotton balls | cotton swabs

Diapers | feminine hygiene products

Cat litter

Tissues | paper towels | wipes

### What is safe to flush

Toilet paper | human waste
