

BE CAREFUL WHAT YOU FLUSH

It's important that we all work together to avoid flushing items down our toilets and drains that could negatively impact local sewers and watersheds.

Remember, your toilets and drains are not trash cans. Sewer pipes and wastewater systems are not designed for the disposal of trash or other items such as medications. Here's what you need to know:

WHAT NOT TO FLUSH:

Medications (dispose at a drug take-back location)

Masks, Gloves & Wipes

Q-tips, Cotton Balls & Dental Floss

Diapers & Feminine Hygiene Products

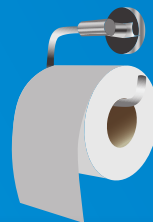

Cat Litter

Flushable Wipes, Tissues & Paper Towels

WHAT IS SAFE TO FLUSH

Toilet Paper & Human Waste
