

Beat the peak this summer

Summer brings higher temperatures – and often higher water use. Let's come together to conserve water this summer. Simple changes at home can make a big difference.

- Water landscapes before 6:00 am to reduce evaporation.
- Check your irrigation system so it only waters your plants, not the pavement.
- Skip watering after it rains. Collect and reuse the rainwater where possible.
- Upgrade to smart or weather-based irrigation controllers for maximum efficiency.

Every drop counts. Join us in using water wisely and keeping our landscapes healthy. Together, we can Beat the Peak.
