NEWS

SPRING 2019

## Liberty Utilities is Going Solar!

**Liberty Utilities** is proud to announce that there is now Solar and Battery Energy Storage at the Palm Valley Water Reclamation Facility! Solar panels have been installed to the west of the plant and on top of some of our buildings. In addition to the solar panels, Tesla batteries were installed to ensure the stability of the grid when unexpected increases in demand or

supply occur. This will increase service reliability, reduce emissions, and offset increasing electricity rates. Liberty Utilities is doing our part to operate as efficiently as possible for the benefit of future generations.

### FIX A LEAK Workshop

Did you know that an average household's leaks can account for almost 10,000 gallons of wasted water? We will be hosting a **Fix a Leak Workshop** to show you how to identify and fix leaks inside and outside of your home and providing **FREE** tools to help!

#### WHEN:

Wednesday, May 22, 2019  
6pm – 7pm

#### WHERE

Palm Valley Water Reclamation Facility  
14222 W McDowell Road  
Goodyear, AZ 85395

#### RSVP

Email Sara Alloway at  
[sara.alloway@libertyutilities.com](mailto:sara.alloway@libertyutilities.com)  
to reserve your spot!

## Beat the Peak

*Water when the Sun's NOT up!*

It's no surprise that our customers use most of their water between 6 a.m. and 9 a.m. when everyone is getting ready to start their day. All that water use coupled with high heat can put a strain on the system, so we ask that you adjust your irrigation controls for outdoor watering to take place outside of peak water use hours. An added bonus for watering your lawn before 6 a.m. or after 9 p.m. is that it helps save water too because less water will be evaporated by the sun and more will go directly to your plants!

## WHICH IRRIGATION SYSTEM WORKS FOR YOU?

July is Smart Irrigation Month! Prepare for the summer by using the most water efficient techniques and systems!

### SMART IRRIGATION SYSTEM

Smart Irrigation systems tailor watering schedules and run times automatically to meet specific landscape needs. These controllers significantly improve outdoor water use – saving water and money.

### DRIP IRRIGATION

Drip irrigation is a type of watering system to save water by allowing water to drip slowly to the roots of plants. The system will place water directly into the soil, on the roots, to minimize evaporation and water efficiently. **Check out our video on our Smart Water Use page at [www.libertyutilities.com](http://www.libertyutilities.com) to see how to install drip irrigation yourself!**

### HAND WATERING

If you have to hand water, make sure you use a soil probe or long screwdriver and plunge it into the soil to ensure the moisture is 6 – 10 inches deep. This will make sure you do not overwater. Overwatering can lead to root rot and soil compaction that robs the roots of oxygen.
